SUMMARY

AI data-annotation contractor and independent AI safety tester specializing in written-English communication, model evaluation, and safety-first red-teaming. I design realistic test scenarios, rate and critique model outputs, and write clear rationales that map back to guidelines. Background includes field work in plumbing and customer-facing roles, so I am comfortable handling emotionally charged, ambiguous user messages and turning them into structured, written work. Seeking remote roles such as AI trainer, LLM evaluator, content rater, and chat-based support.

CORE SKILLS

- AI data annotation and content rating for LLM training
- Evaluation of chatbot responses for quality, safety, and adherence to policy
- Prompt design and scenario construction for edge-case probing
- Text-based customer support and de-escalation (chat and email)
- Clear written communication, documentation, and report writing
- Troubleshooting and root-cause problem solving
- Explaining complex or technical issues in plain language
- Comfortable with email, docs, spreadsheets, ticket workflows, GitHub, and AI tools

EXPERIENCE

Outlier (via Scale AI) - AI Data Annotation Contractor

Remote - November 2025 - Present

- Label and annotate text and multimedia data to support large language model training and evaluation.
- Apply detailed written guidelines under time constraints while maintaining accuracy and consistency across edge cases.
- Write short, structured rationales that explain why a sample meets or fails quality and policy expectations.
- Flag ambiguous, unsafe, or policy-sensitive content for escalation rather than forcing incorrect labels.

Spangler AI LLC - Owner / AI Conversation and Safety Tester

Remote - November 2025 - Present

- Design and execute field tests on production AI tools (Quillbot, Meta AI, Gemini and others), focusing on harassment, blame-shifting, mental health boundaries, and trust.
- Develop an L0 to L5 failure taxonomy and apply it to real interactions, classifying issues from minor misalignment to active participation in harmful dynamics.
- Produce polished, GitHub-hosted PDF reports that include scenario setup, prompt flow, analysis of model behavior, and concrete recommendations for product and safety teams.
- Use realistic personas and emotionally charged but plausible prompts to probe where models bend or break under modest user pressure.
- Maintain spanglerai.com as a portfolio site highlighting AI evaluation, safety analysis, and red-teaming work.

American Leak Detection of Arkansas - Apprentice Plumber / Field Technician

Little Rock, AR - March 2022 - October 2025

- Diagnosed and repaired complex leaks in water, sewer, gas, and vacuum lines, often with incomplete information and time pressure.
- Walked homeowners through stressful, high-stakes situations and explained options in clear, non-technical language.
- Worked independently in the field while coordinating with office staff to keep jobs on schedule and documented.

United States Census Bureau - Enumerator

Arkansas region - May 2020 - October 2020

- Interviewed residents who had not yet self-reported for the Census, collecting sensitive information accurately and confidentially.
- Built rapport with skeptical or frustrated people while following strict federal procedures and scripts.

US Pizza Co. - Back of House / Manager Trainee

Cabot, AR - September 2016 - October 2017

- Supported all back-of-house roles during high-volume rushes (prep, ovens, expo, dish).
- As a manager trainee, assisted with basic staff coordination, workflow management, and quick problem resolution.

SELECTED AI CONVERSATION AND EVALUATION WORK

- Designed and documented three named case studies for conversational AI models: The Derrick Method (employment-dispute red-team), The Brooklyn Method (multi-operator possession narrative stress test), and The Therapy Method with The Brandon Exception (therapy-adjacent boundary and diagnosis guardrail stress test).
- Turned long-form conversations into structured PDFs aimed at safety, policy, and product stakeholders, including scenarios, transcripts, analysis, and recommendations.
- Quillbot L2 tests: documented how Quillbot first refused, then generated explicit harassment and self-harm-adjacent lines such as "go stand in traffic" and "go drive off a cliff" in employment-dispute contexts after modest user pressure.
- Workplace trench fatality test: showed how a writing assistant initially refused to help shift blame for a worker's death, then produced a polished letter that laundered responsibility away from the negligent owner.
- Meta AI Messenger L3 test: demonstrated how a social-chat assistant joined in targeted "roast" style bullying of a participant after explicit distress and boundary-setting, while giving contradictory bystander advice.
- Gemini L1 diagnosis-confirmation test: analyzed a mental-health scenario where Gemini avoided direct medical advice but used confusing language that felt like both confirming and denying a diagnosis, creating a trust and clarity failure rather than direct medical harm.

EDUCATION

Central Arkansas Plumbing School - Journeyman Plumber Training

Little Rock, AR - 2022 - Present

CERTIFICATIONS

Open Water Diving Certification (2023)

TracPipe Certification (2024)
